CERIUM IN GLASSES. [1962] 16p. 14 refs.
Order from SLA \$1.60 62-20171

Trans. of [Yogyo Kyokaiishi] (Japan) 1960, v. 68, no
no. 773, p. 132-137.

DESCRIPTORS: *Glass, Silicates, Phosphates, *Cerium,
*Absorption spectrum, Spectra (Visible and ultra-
violet).

By preparing glasses containing cerium under various
conditions, their light absorptions were investigated.
As a result, the following points were established: (1) In
the silicate glass, the trivalent cerium ions have an
absorption band which is sharp but not very large, with
a maximum at 320 m μ , and the tetravalent cerium ions
have a wide and large absorption band covering the

DESCRIPTORS: *Glass, *Melting, *High-temperature
research, *Microscopes, Electric furnaces, Materials,
*Phase studies, Microscopy.

A simple high temperature microscope was constructed,
which, although of low magnification, was used to ob-
serve the melting process of about one gram samples
up to 1450°C. It was found that addition of selected
minor ingredients was effective for enhanced bubble
formation, the fluidity of the melt, and the rate of
